## RECENT PROJECTS

### Biometric Attendance Manager (01/2019 – 09/2019)

- The project was a web app with a local server setup on a raspberry pi device along with Biometric reader. The device serves as a central console to add, delete and check in/out of personnel for any institute.
- The app was developed on Web2py framework due to its light weight running capability to work smoothly on Raspberry pi

### Lead Management Application (09/2019 – 02/2020)

- A Web2py Application used to monitor leads and business referrals.
- Users can create multiple accounts for Sales Persons and for Sales managers to create leads and to manage leads respectively.
- Multiple charts, graphs and models can give users and clients a complete view of their leads and activity updates.

### StudentPortal Application (02/2020 – 04/2020)

- A Web2py Application used to manage a complete Educational institute
- The application provides a solution to manage students, Faculty, Admins and Exam departments
- Different modules of the application allow various activities and features.
- From sharing study materials, Self study contents and Assignments the application has multiple features.
- The application even allows submission and evaluation of assignments.
